

Fusion Leverbacks

F0664

F0727
with split ring

APAC has developed a leverback which utilizes fusion technology to easily bond settings, motifs, and in some cases castings, to the face of the leverback without subjecting the parts to intense heat associated with conventional solder or brazing methods.

These fusion leverbacks incorporate a fusion head and nib similar to the popular fusion ear posts while utilizing a patented process of manufacturing.

APAC's new fusion leverback makes manufacturing new and unique styles of leverbacks easier than ever while improving the overall durability of the item, allowing manufacturers to concentrate on design and stay current with today's fashion trends. Fuse unlike metals, finished plated items, pre-set stones without annealing, distortion or discoloration.

Available in Sterling Silver, 14/20GF, Brass and Surgical Steel. Contract fusion service available.

For details on the Sparkie II Fusion Machine, see Page 18.
